SUMMARY OF QUALIFICATIONS

- Backend-focused MERN stack developer experienced in building scalable web applications using Node.js, Express.js, React, and MongoDB.
- Strong knowledge of REST API design, JWT authentication, database modeling, and server-side architecture.
- Developed full-stack applications including a service management system and a real-time collaborative notes platform using Socket.IO.
- Interested in backend engineering, system design, and building reliable production-ready web applications.

EDUCATION

National Institute of Technology, Durgapur
B.Tech, Metallurgical and Materials Engineering
CGPA: 8.88

Durgapur, W.B
2024-2028

RELEVANT COURSEWORK

Computational Material Science, C/C++ Programming, Web Development Manufacturing Processes, Metallurgical Thermodynamics, Simulation of Metals and Alloys

TECHNICAL SKILLS

Languages: C, C++, JavaScript
Frontend: React.js, HTML, CSS
Backend: Node.js, Express.js
Databases: MongoDB, PostgreSQL
Tools: Git, GitHub, Postman
Other Software: Excel, Word, Origin, LAMMPS, OVITO

Research and Academic Projects

PrintHub: Smart Service Shop Manager (MERN Stack) GitHub | Live Demo Feb–Mar 2026

- Developed a full-stack MERN application for managing printing and stationery shop services.
- Implemented JWT-based authentication and role-based access for secure admin operations.
- Designed RESTful APIs for order management, service requests, and user interactions.
- Integrated cloud-based file upload functionality for document submission and processing.

Real-Time Collaborative Notes Application

Nov 2025

- Built a collaborative note editing platform allowing multiple users to edit content simultaneously.
- Implemented real-time synchronization using Socket.IO for instant updates across clients.
- Developed backend APIs using Node.js and Express for note management and user authentication.
- Designed MongoDB schemas to handle users, notes, and collaboration rooms.

DEVELOPMENT ACTIVITIES

Backend Development Practice

2025 – Present

- Building backend systems using Node.js, Express.js, and MongoDB.
- Implementing authentication, REST APIs, and database schema design in personal projects.
- Following clean backend architecture using controllers, routes, middleware, and models.

Data Structures and Algorithms

2025 – Present

- Practicing algorithmic problem solving using C++.
- Studying core topics including arrays, recursion, trees, graphs, and dynamic programming.
